Youth Excursion

A group of 14 high school students from throughout South Dakota participated in the 2022 Youth Excursion to visit Basin Electric Power Cooperative and learn how electricity is produced and distributed.

B-Y Electric planned to send three students on this trip, but unfortunately all the selected students were unable to attend.

The group's schedule of events included a tour of Basin Electric headquarters (Bismarck, N.D.), one of the nation's largest generators of electricity serving more than three million homes, businesses and farms across nine states.

The students also made a trip to Beulah, N.D., to tour the Antelope Valley Station power plant, the Freedom Coal Mine, and the Dakota Gasification Co. facility.

They explored the Bismarck State College campus and stopped at the National Energy Center of Excellence where they participated in a safe driving simulation and learned how electricity is moved from a generation facility across the regional power grid by regional transmission operators.

The students were sponsored by nine electric distribution cooperatives and was organized by the South Dakota Rural Electric Association (SDREA) based in Pierre.

"Electric cooperatives are committed not only to providing safe, affordable power, but also to providing opportunities to educate our future leaders," said event organizer Jocelyn Johnson of SDREA. "We need to make sure our young people have an understanding of where their power comes from and the complexities of providing grid-scale electricity that's not only affordable but accessible around the clock."

Watch this magazine, our Facebook page, and website for information about our all-expenses paid youth trips next year.
